Charging a Chainsaw with Solar **Energy Efficiency**

1. A SOLAR PANEL collects the energy of the sun. The more panels, the more energy!

ELECTRIC CHAINSAWS

- No emissions
- No fuel to haul
- Less noise
- Light and compact
- Easy to start

2. A POWER INVERTER takes the energy from the solar panel and converts it to a usable form.

3. A BATTERY **CHARGING DOCK** is plugged into the converter.

Charging a second battery while working saves time!

• No gas & oil to mix No smell • Easy to store • Less engine maintenance • Less damage to the environment

4. The BATTERY goes into the dock and stores the energy that came from the solar panel
