

Energy Efficiency

Change to Save

Just change some simple habits to see big savings!

Limit the time you have the refrigerator/freezer door open.
Organize the contents so you can find things quickly. Avoid over-filling the compartments to improve air-flow.

Close windows and doors tightly.
Even a small crack can lose a lot of heat.

In the winter open curtains and blinds during the day and close them at night to save heat.

Unplug devices after charging.
The small transformers continue to use energy while they are plugged in.

Try air-drying your clothes when weather permits.
Save energy and get fresh-smelling laundry.

Take showers instead of baths.
The shorter, the better. This will save a lot of hot water heating.

Turn off the lights and TV when you leave the room.

Use cold water when possible, especially during clothes washing. Only run full loads of laundry or dishes.

Program the thermostat for lower temperatures when you're sleeping or away during the day.

Keep Dryer Vents & Furnace Filters Clean.
If they run efficiently they use less energy!

Lower the temperature on your hot water heater to moderate and even lower when you will be gone for multiple days.

Save Money • Save Energy • Save the Environment
