

Did You Know ?

WOOD HEATING WORKS

Save money on home heating.

Reduce your carbon footprint.

Keep your home warm when there is no electricity.

Make less smoke using dry wood and hot fires.

Cut your own firewood (something fossil fuels cannot offer).

Wood heating is renewable energy since trees grow quickly.

Enjoy the smell and looks of a warm fire.

Wood heating is “carbon-neutral.”

Other trees absorb the carbon dioxide made by burning wood so no extra carbon dioxide is produced.
